Abstract (en)
The present invention relates to a groove holder (10) for a tiller lock for a tiller extension with a spiral groove handle comprising a base plate (1) and a foldable holding plate (3) for receiving the handle. The base plate (1) comprises a substantially rectangularly shaped cut-out between two legs (1A,1B) at one end interconnected by an interconnecting section (1C) and being somewhat resilient. Holes (11A,11B) are provided in the free ends of the legs (1A,1B) for receiving a shaft (4), on which the holding plate (3) is pivotably mounted via a through hole (31). A longitudinal V-shaped edge (8) at the centre of the hole (11A,11B) of at least one of the legs (1A,1B) is arranged to mesh in cross-wise milled cuts (5) in the holding plate (3) at the through hole (31) so that said holding plate (3) can be blocked in at least a folded down position and a folded up position. The outer edges (9) of the base plate (1) are round.
