Abstract (en)
[origin: EP2487305A2] A housing for a toilet sanitising block comprises a base (2) for supporting a sanitizing block. An upwardly extending wall section (18) defines an enclosure for the sanitising block. A cap (20) is connected to the wall section (18) to cover the enclosure. At least one aperture (6) is provided in the housing which is spaced from the base (2) to permit the release of fragrance from a sanitizing block contained within the housing. The cap (20) has no apertures such that the sanitising block is protected from liquid and/or urine. The housing is intended to be installed in the drain of an urinal.
