Abstract (en)

The present invention provides an air conditioner and a method for controlling an air conditioner whereby the direction in which conditioned air is discharged during powerful operation can be controlled. The air conditioner (1) is provided with a control unit (60). The control unit (60) is connected to a compressor (21), a four-way switching valve (22), a pressure-reducing device (25), ROM (41), RAM (42), a fan motor (13), a flap motor (146), a temperature sensor (43), and an infrared sensor (44). The control unit (60) controls the compressor (21), four-way switching valve (22), pressure-reducing device (25), fan motor (13), and flap motor (146). When a command for powerful operation is entered from the remote control (40), the control unit (60) temporarily increases the rotational speed of the cross-flow fan (12), the operating frequency of the compressor (21), and the like, enhances the air conditioning capacity, and controls the direction of the horizontal flap (144) so that air is discharged in the direction in which people are not present during said powerful operation.
