Abstract (en)  
[origin: EP2487446A2] The closure (1) has a housing (2), and a guided chamber body (3) that is displaceable in a longitudinal direction. A spring loaded firing pin (12) is movable in the body. A small castle (5) is arranged at a rear end of the chamber body. A clamping mechanism e.g. intermediate lever (24), actuatable by an operating element is arranged in the castle for clamping and unclamping a main spring (13) acting on the firing pin. The operating element is provided as a clamping slide (23) that is displaceable at a rear side of the castle between a lower release position and an upper clamping position.
