Abstract (en)
[origin: WO2011045035A1] The invention relates to a wall-mounted metering dispenser (1), comprising a wall mounting (2) having two retaining arms (3, 4), between which a refill unit (5) is detachably held, said refill unit comprising a storage container (6) and a removal device, the removal opening (7) of which is directed downward, wherein the retaining arms (3, 4) can be detached from one another and/or moved relative to one another between a release position and a retaining position, and wherein the removal device can be actuated by applying pressure to the storage container (6), at least a portion of the container wall of which is made of a resilient material. The wall-mounted metering dispenser (1) according to the invention is characterized in that the refill unit (5) is movably held in the wall mounting (2) and can be moved between a stand-by position and an actuated position, and the wall mounting (2) is provided with at least one actuation protrusion (9), which in the actuated position acts on the container wall at least in the resilient portion thereof such that the removal device is actuated. The wall-mounted metering dispenser (1) according to the invention is particularly easy to use, even when the user has very dirty hands, without drastically soiling the periphery of the storage container (6) in the process.
