Abstract (en)
[origin: WO2011044939A1] The invention relates to a high-pressure cleaning device (10), comprising a first function apparatus (104) required for operation in the form of a heatable heat exchanger (104) for heating a liquid that can be discharged by the high-pressure cleaning device (10) and at least one further second function apparatus (34, 36, 42, 44, 46, 48, 50) required for operation, which is arranged below the heat exchanger (104). In order to further develop such a high-pressure cleaning device (10) such that the high-pressure cleaning device can be maintained in a user-friendly manner, the high-pressure cleaning device (10) comprises a first device unit (134) having a carrying apparatus (80), on which the heat exchanger (104) is retained, and a second device unit (136) having a supporting apparatus (60), on which the at least one second function apparatus (34, 36, 42, 44, 46, 48, 50) is retained, and the carrying device (80) can be detachably connected to the supporting apparatus (60) in a force-closed and/or form-fit manner.
