Abstract (en)

[origin: WO2011079934A1] The invention relates to a method for producing a particle-based element (5, 23), especially a chipboard or fiberboard, a particle mass (1, 28) having a plurality of particles being made available. A first part (3) of the particle mass (1, 28) is arranged in a desired matrix consisting of a second part (4) of the particle mass (1, 28) in a targeted manner when the particle mass (1, 28) is made available, the first part (3) of the particle mass (1, 28) and the second part (4) of the particle mass (1, 28) having different compressive properties. The particle mass (1, 28) made available is compressed.
