Abstract (en)  
[origin: WO2011045649A1] The invention relates to an insulating, self-supporting, cardboard construction module (10), in particular for building construction, characterised in that said module comprises a central core (1) defining at least the height, the width and the cross-section of said module, said central core comprising a plurality of layers of corrugated and/or cellular cardboard, at least one sealing film (2) arranged around said central core such as to cover all the surfaces thereof, at least two support and protection panels (3) arranged on either side of said central core such as to cover at least two of the surfaces thereof, respectively the inner and outer surfaces, and at least two frames (4) vertically adjacent to said protection panels, forming a load take-up framework and defining a free inner space (5) for technical elements to pass therethrough, said frames being attached to one another by means of attachment members which pass right through said protection panels and said central core.
