Abstract (en)

The bag (1) has an upper outer wall (2) and a lower outer wall made of filter materials, and an inflow opening (3) formed in the upper outer wall. A tubular structure made of air-permeable materials is arranged in the bag. A through-opening arranged opposite to the inflow opening is provided in a middle region of the bag. The tubular structure is partially fixed on the outer walls. The tubular structure is made of a material with greater air permeability than the outer walls. The through-opening is held by a retaining plate (4).
