Abstract (en)

[origin: EP2489294A1] The device (1) has a water inlet (3) and a water outlet (4) that are connected by a pressurized water circuit (6). A product selector (14) e.g. four way selector, selects one of a set of liquid cleaning products (10A-10C) that are provided in respective containers. A venturi nozzle (18) is located in the water circuit, and connects the selector to the water circuit. The device and the containers are provided in a closed receptacle (8) formed of two half-casings that are assembled together. The water circuit includes an on-or-off valve (16) positioned in upstream of the nozzle. Two of the containers have capacity of one liter, and the other container has capacity of two liters.
