Abstract (en)
[origin: EP2489297A1] The appliance (1) has rear force sensors (4, 5) and front force sensors (6, 7) attached to a container (2). The sensors support the appliance with respect to a surrounding kitchen furniture or a wall in an installed state and/or support the appliance against external forces in a stacked or raised position during transportation or temporary storage. The sensors are indirectly or directly held at the container. One of the sensors is provided with an open or closed recess. Flaps or hook-like holders engage in the recess in a mounted position of the sensors. The flaps are attached to an outer area of the container. The force sensors are formed as plastic injection molded parts.
