Abstract (en)

[origin: EP2489803A1] The device has a filling element i.e. joint (300), for filling an inter-rafter space between a lower face of a roof panel and an upper edge (210) of a beam i.e. wall plate (200). A flexible sealing part (400) has a U-shaped body matching a profile of lower part (110) of rafter (100) for being arranged between the rafter and the wall plate. The part has vertical branches equipped with lateral projections projecting toward exterior on two sides of the rafter to engage or receive ends of the element. The part is formed by molding a vulcanized/non-vulcanized thermoplastic elastomer material.
