Abstract (en)

[origin: EP2489805A2] The anchor (10) has separate prefabricated joint socket elements (16A, 16B) arranged in respective connecting zones that are located between a connecting element (14) and anchoring elements (12A, 12B). The prefabricated joint socket elements are rigidly connected with the connecting element or with the anchoring elements by preformed end portions of the joint socket elements. A set of connectors retains the preformed end portions in end regions of the assigned anchoring elements and/or connecting element.
