Abstract (en)

[origin: EP2489806A2] The method involves applying a grid or a network (5) with spacer bodies (7) on a substrate, and applying a priming material. The priming material is removed in the height from the substrate facing away from the ends of the spacer body. The textile glass grid or network is applied as a grid or network. The grid or network is applied, which carries the spacer body at intersection or junction point. An independent claim is also included for a grid or a network comprises a spacer body.
