Abstract (en)
[origin: WO2011047748A1] A backrest, in particular for a rear seat arrangement of a motor vehicle, has a shell (2), which has a width which extends over at least two seats, and at least two lower and at least one upper connecting point (A), wherein the shell (2) has a base matrix which is composed of a thermoplastic and is formed with a supporting structure (4') which has a shape which completely surrounds the shell (2) on two sides which are adjacent to one another and partially surrounds the shell on each of the sides directly adjoining said two sides, and, starting from the common corner of the sides which are adjacent to one another and are completely surrounded by the supporting structure (4') on the outside, runs obliquely to an end, which ends in the intermediate region between the seats, of one of the sides which is partially surrounded by the supporting structure (4'), and the supporting structure (4') connects the three connecting points (A) to one another.
