Abstract (en)
[origin: WO2011048576A1] The invention relates to a fork for handling equipment, comprising: a fork arm extending along an arm axis (B), and a trigger (22) mounted on the fork arm such that it can rotate between inoperative and operative positions. The trigger comprises a distal trigger end (26) which, in the inoperative position, defines the distal end of the fork and the trigger is configured such that, when a pressure (FR) is exerted on the distal trigger end along the arm axis (B) in the direction of the fork arm, the trigger tilts from the inoperative position to the operative position.
