Abstract (en)

[origin: EP2491807A2] The body (1) has an upper sole body portion (1a) deformed at a pressure load in a direction of a lower sole body portion during a rolling motion such that a rear sole body region (7) attached to a double sole portion (15) applies aligned force in an upward direction. A spacer or cavity (17) stays in connection with an upper side formed above the upper sole body portion via an air opening. The upper sole body portion is air-permeable and made of an air permeable material. The upper sole body portion is provided with air passage openings (21) and/or perforation. The body is made of plastic. An independent claim is also included for a shoe.
