Abstract (en)

The present invention relates to a built-in home appliance comprising an adjustment mechanism with a nut (32) whereon the leg rod (31) advances in vertical direction while the leg rod (31) rotates; and an adjustment shaft (45) which rotates the leg rod (31) of said rear leg group (30) and which extends with substantial rigidity and which extends substantially horizontally with respect to the ground, in order to adjust the height of a rear leg group (30) belonging to a built-in home appliance. Said built-in home appliance is characterized in that said adjustment mechanism comprises a movement transfer mechanism (40) which transfers the rotational movement of the adjustment shaft (45) to the leg rod (31) so that the leg rod (31) rotates around the own axis thereof.
