Abstract (en)
A bottle chiller (100) including a housing (110) and an inner member (120) positioned within the housing (110) is presented, the inner member (120) having a first portion (510) and a second portion (520) such that the first portion (510) rests on the second portion (520), the inner member (120) including a plurality of spaced apart openings (130). The first portion (510) has a first diameter and the second portion (520) has a second diameter, the second diameter being greater than the first diameter. The second portion (520) of the inner member (120) is configured to receive water and a vertical gap portion extending from an inner surface of the housing (110) to an outer surface of the first portion (510) of the inner member (120) is configured to receive ice.
