Abstract (en)

Data regarding the design of a knit product input by an operator is converted into design data of the knit product, and the arrangement and the connection of stitches are displayed on a color monitor (6). If an instruction to insert or delete a wale or course of stitches is input, whether or not functional data is included in the input range is detected, and an insert or delete position is shifted so as not to include functional data if functional data is included in the input range.
