Abstract (en)
A joint structure for connecting beams in a building frame is disclosed, the joint structure comprising a sleeve adapted to accommodate a first beam of a building frame passing therethrough and a first beam support including a first socket and a first flange portion attached to the first socket. The first socket is adapted to accommodate an end of a second beam of the building frame therein, and the first flange portion is attachable to the sleeve so as to fix the second beam relative to the first beam. A joint and a building frame using the joint structure are also disclosed.
