Abstract (en)

[origin: EP2492419A2] The pivoting bolt lock (1) has a lock housing (2) with a base part (8) and a pivoting bolt (4) that is held at a face plate (5) in rotary mobile manner. An intermediate housing part (20) is fixed between the base part and the face plate for variable magnification of distance between a locking mechanism (3) and a front edge (5a) of the face plate. A retainer geometry is arranged at the base part of the lock housing for assembling an intermediate mechanism (10).
