Abstract (en)

[origin: EP2492420A2] The fitting (1) has flat-planar inner side (3) facing towards a door leaf and extended around an actuating axis (9) of a door handle. A fastening unit is accommodated in fastening points (6) and fixes the inner side at the door leaf. The inner side includes a structure (4), which causes form closure between the inner side and the door leaf. The structure and the inner side form a monolithic component. The structure includes two fixing pins (5a) with a pointed contour at the door leaf. The fixing pins are formed as a cone or pyramid.
