Abstract (en)

[origin: EP2492941A1] The device has a grenade (8) including a projecting element (10) and another projecting element respectively cooperating with openings (6, 7). The projecting elements, the openings and end portions (4b) of one of cranks (4, 5) are shaped in a manner such that the elements are introduced into the openings when a movable rod (14b) is extended in a plane (P) passing through a longitudinal axis (X) of a shaft (1) and the cranks, and are maintained in the openings after rotation of bar portions (9) in the openings at an angle between 30 and 150 degrees with respect to an axis of the bar portions. An independent claim is also included for an electric switchgear.
