Abstract (en)
[origin: WO2011051344A1] The invention relates to a sealing element (10) for a vacuum cleaner (40) for sealing between a first (41) and a second vacuum cleaner element (42), wherein the second vacuum cleaner element (42) is movable relative to the first vacuum cleaner element (41). The sealing element (10) has a fixing unit (20) for fixing on the first vacuum cleaner element (41). A sealing lip (30) with a sealing surface (31) for sealing can be moved on the fixing unit (20), and an inner bead (32) lies on the sealing lip (30). An outer bead (33) also lies on the sealing lip (30). The invention enables providing a sealing element with simply designed and inexpensive means, said sealing element forming an improved seal. In particular, the sealing element can ensure a reliable sealing effect at any time during the operation of the vacuum cleaner and in the event of faults so that a vacuum cleaner chamber can be sealed against leakage.
