Abstract (en)

[origin: CA2777667A1] The invention relates to a lateral wall arrangement (10) for laterally bounding the roller gap of a roller press having rollers supported in a machine frame, driven in opposite directions, and forming a roller gap, comprising a lateral wall (14), an assembly device (11), and a suspension (12) for the lateral wall, wherein the lateral wall (14) is supported in a spring-loaded manner by the suspension (12). According to the invention, the suspension (12) is a linkage in the simplest case. It is thus achieved in an advantageous manner that the lateral wall (14) is both easy to dismantle and is able to follow deflection motions of the rollers.
