Abstract (en)
[origin: WO2012037584A1] The aim of the invention is to sharpen a grinding tool, in particular a grinding wheel (1) that is provided for trimming the edges (5) of a glass panel (7). This is achieved in that a sharpening tool (21) is associated with the grinding wheel (1), said sharpening tool being constantly or intermittently active in order to sharpen the grinding wheel (1) during the operation of the grinding wheel (1) to trim edges (5). Halting production for sharpening is thus not necessary, and a constantly unvarying quality of the result of the grinding work (trimmed edge (5) of a glass panel (7)) is ensured.
