Abstract (en)

[origin: WO2011051211A2] The invention relates to a method for operating a water treatment system (1), in particular a pure or very pure water treatment system, wherein water is fed into a circuit (2) in water treatment operation, is treated by circulating in the circuit (2), and is then discharged from the circuit (2), wherein effective disinfection can be achieved in a short period of time in that ozone is added in a disinfection area to the water circulating in the circuit (2), or ozone is generated in the water circulating in the circuit (2), said ozone flows through at least a portion of the circuit (2) with the circulating water and then is removed from the circuit (2).
