Abstract (en)  
[origin: WO2011051418A1] The invention relates to machine cleaning methods using a supplied form of cleaning agent, comprising a) a preferably liquid cleaning agent preparation B, containing at least one bleach activator; b) a preferably liquid cleaning agent preparation D, containing at least one oxygen bleaching agent; wherein the cleaning agent preparations B and D are dosed during the cleaning method from a cartridge located preferably in the inner space of the cleaning machine into the inner space of the cleaning machine, characterized in that a partial quantity b of the cleaning agent preparation B present in the cartridge is dosed into the inner space of the cleaning machine. According to the invention, a residual quantity of the cleaning agent preparation B present in the cartridge remains in the cartridge until the end of the cleaning method, said residual quantity corresponding to at least double the quantity of the partial quantity b, and a partial quantity d of the cleaning agent preparation D present in the cartridge is dosed into the inner space of the cleaning machine, wherein a residual quantity of the cleaning agent preparation D present in the cartridge remains in the cartridge until the end of the cleaning method, said residual quantity corresponding to at least double the partial quantity d.
