Abstract (en)
[origin: WO2011051143A2] A refrigeration device has an ice maker which comprises at least one tray that is held such that it can be swiveled about an axis and that is subdivided into a plurality of compartments to produce one chunk of ice each and at least one collection container for ice produced in the at least one tray. The ice maker can be removed from the refrigeration device while the collection container remains in the device.
