Abstract (en)
[origin: WO2011051561A1] The invention relates to a method for temperature controlled transport. In the method, temperature controlled products (11) are transported. In the method, a passive transport is used, in which the product (11) is packed in an essentially energy tight transport package (12). In addition, in the method a thermal element (13), by means of which the internal temperature of the transport package (12) is maintained as desired without external energy, is included in the transport package (12). Further, in the method the temperature of the transport package (12) is monitored wirelessly essentially continuously. The invention also relates to a system for temperature controlled transport.
