Abstract (en)

[origin: WO2011054422A1] The invention relates to a protection system (3) for a vehicle/object (1), in particular against approaching bomblets, in the form of a one-part or multi-part structure (5) made of a net-like woven fabric - a woven-fabric mat (6), which can unfold if a threat has been sensed, wherein the structure (5) is connected to the highest elevation of the vehicle/object (1) by means of a connection (2). A transport collar ensures the connection (2). Hose constructions (8) and/or elastic rods, by means of which the unfolding of the structure (5) is achieved, are incorporated in the structure (5). The sensing of a threat can be performed by a Doppler radar.
