Abstract (en)

[origin: WO2011050908A2] The invention relates to a device, in particular for display units, comprising a first disk-shaped element and a second disk-shaped element, and a coating introduced between the first disk-shaped element and the second disk-shaped element. The invention is characterized in that the coating is an IR-reflecting coating, which is applied to the first and/or second elements, and that the at least first disk-shaped element, the at least second disk-shaped element, and the coating form a composite, and that the space between the disks is filled with a filling material.
