Abstract (en)
[origin: WO2011051132A1] The invention relates to a method for creating a website (192) using at least one attribute stored in an ID token (106, 106'), wherein the ID token is associated with a user (102), said method comprising the following steps: authenticating the user with respect to the ID token, authenticating a first computer system (136) with respect to the ID token, establishing read access of the first computer system to the at least one attribute stored in the ID token after authentication of the user and the first computer system with respect to the ID token, signing the at least one attribute read from the ID token by the first computer system, transferring the at least one signed attribute from the first computer system to a second computer system (150), testing the signature of the signed attribute by means of the second computer system, creating a website (192) by means of an https-capable web server of the second computer system, wherein the website comprises the at least one attribute, and wherein the identity of the web server and the URL of the website are guaranteed by an SSL certificate.
