Abstract (en)

[origin: EP2317673A1] The method involves controlling reception and/or access to data by a control unit having a microcontroller (6) based on access rights, where the transmitted data comprises temporal information relative to an event. The access rights are controlled based on the temporal information relative to the event. Additional information related to the data is loaded by a short or average interface, where the additional information comprises indication of localization of a loading place and/or indication of frequency to receive the data relative to the loading place. An independent claim is also included for a device for controlling radiofrequency reception of data.
