Abstract (en)

[origin: EP2317754A1] The present invention generally relates to digital communications, and more particularly, to a technique for processing data in a digital communication device so as to reduce channel change times. To this effect, the invention comprises a method of reception of digital audio/video, comprising the successively a step of decoding (703) audio/video data comprised in a first received audio/video stream using an audio/video decoder, a step of reception (715) of a channel change request a step of sending of a request to stop (705) receiving the first audio/video stream to a network and a request to start (706) receiving a second audio/video stream, a step of stopping (707) of the audio/video decoder (203), and a step of starting (710) of the audio/video decoder (203) to decode audio/video data comprised in the received second audio/video stream.
