Abstract (en)

[origin: EP2495074A2] The apparatus (1) has a brush (11) that is rotatably supported in one working chamber of the housing (4). An abrasive material is applied at the bristles of the brush. A suction duct (6) opened into the working space, is connected to a suction unit. The operation of the brush is adjusted by changing the shape of a circular cylinder and by changing the axial position of the brush according to the geometry of the objects (2). The orientation of axis of brush is adjusted relative to horizontal direction.
