Abstract (en)

[origin: EP2495173A1] The device (1) has a supporting structure (40), a filling nozzle for filling a valve sack (2) provided with a sack body (3) and a valve (4), and a sack holder (7) for guiding the valve sack. The sack holder is fixed to the supporting structure. A bracing device (8) is arranged in the filling position (10) during the filling process such that the bracing device partially immerses into the valve of the valve sack hanging at the filling nozzle. An independent claim is also included for a method for filling free flowing goods in valve sacks.
