Abstract (en)
[origin: WO2011055046A1] The invention relates to an antiskid overshoe suitable for being reversibly secured to a shoe. The overshoe consists of a net (1) made of a textile material, and in this instance, consists of cords produced by knitting, said cords in turn being assembled together by knitting so as to define the meshes of the net suitable for forming cleats. Both ends of the net are encapsulated in a strap (3,4), each defining a closed loop through which an elastic cord (2) passes, said elastic cord further passing through the meshes defined at the two side edges of the net (1).
