Abstract (en)
[origin: WO2011054455A2] The invention relates to a screening machine with a substructure which has profiles between lateral cheeks, on which profiles there can be fastened tensioning screens, wherein curve-compensating crossmembers, in particular of plastic with a metal reinforcement, of which the upper side is straight, are fastened on the profiles instead of the tensioning screens, and wherein the upper side of the curve-compensating crossmembers forms a profile which is designed in such a way that plastic screening elements can be releasably fastened to the profile upper side.
