Abstract (en)
[origin: WO2011050467A1] There is provided a system for use in performance of injection molding operations, wherein the system can include a plurality of injection molding assembly components. In one embodiment, the system can be operative so that various information respecting components of the system can be recorded within a component database. The component database can be a computer implemented database and in one embodiment can be utilized to output information that indicates past and/or present conditions prevailing within the system.
