Abstract (en)

[origin: WO2011054414A1] The invention relates to a method for controlling a control variable for a processing machine, in particular a printing machine (100), in particular a gravure printing machine, which has driven rollers (111', 112', 113', 114', 121, 122, 123, 124) for transporting and/or for processing a material web (101), of which rollers at least one (121, 122, 123, 124) is not part of a clamping point (110, 111, 112, 113, 114, 115), wherein a first control element (121'", 122'", 123'", 124'") is pilot-operated based on a second control member (111", 112", 133", 114") according to a control value (uR1, uR2, uR3, uR4) in order to adjust the at least one driven roller (121, 122, 123, 124) that is not part of a clamping point (110, 111, 112, 113, 114, 115).
