Abstract (en)
[origin: WO2011054698A1] The invention relates to a chemical reactor (2) of a technical plant, in particular a power plant system, comprising a gas-tight wall forming a gas channel (5), wherein heat exchanger surfaces that are permeable with a first fluid and at least partially comprise a catalytically active surface are located in the gas channel (5). The invention further relates to a method for converting CO using such a reactor.
