Abstract (en)

[origin: WO2011054769A2] Process for manufacturing a product derived from epichlorohydrin by conversion of epichlorohydrin starting from a raw material comprising epichlorohydrin, in which use is made of an alkylating agent as an additive, said alkylating agent being added to at least one step of the process or formed in at least one step of the process, in an additional amount relative to the amount of this alkylating agent possibly present as an impurity in the raw material, said alkylating agent being chosen from halogen-substituted, sulphate-substituted, sulphonate-substituted, carbonate-substituted and phosphate-substituted organic compounds and mixtures of at least two of them.
