Abstract (en)

[origin: CA2779646A1] The invention relates to a clearing strip for the blade of a snowplow, the clearing strip having a steel fastening neck (1) and a rubber body (4) which is vulcanized onto the fastening neck (1) and is reinforced on its outer face by steel plates. The outer faces of the rubber body (4) are reinforced by means of large surface-area, rigid steel plates either on one side or on both sides. The steel plates fastened to the outer surface of the rubber body (4) are divided into separate steel segments (3) that are arranged adjacent each other and together form a uniform clearing edge close to the ground.
