Abstract (en)

[origin: WO2011054863A1] Refrigerating appliance (1) including a unit (2), a door (3) and a double door (4) which may be coupled to the unit (2), and a bellows gasket (6), in association with the door (3) and double door (4), suitable to perform a closing seal between the door (3) and the unit (2), the double door (4) including, at one end, a first and a second part (7, 8) substantially perpendicular between them and joined by a connection portion (20), the first part (7) being a terminal part of the double door (4). The bellows gasket (6) includes a base wall (9) and a connection portion (10), the connection portion (10) includes an elastically deformable appendix (11), defining, with a portion (9a) of the base wall (9), a seat (12) within which is inserted said first part (7) of the double door (4). The bellows gasket (6) includes a side wall (13a, 21) set behind the second part (8) of the double door (4), and the appendix (6) extends up to overlap at least partially the connection portion (20), so as to improve the stability of the connection between the bellows gasket (6) and the double door (4).
