Abstract (en)

[origin: WO2011051501A2] A training simulation system for a drone system comprises a trainer station (10) having a first output means (101, 102, 103), which is equipped to generate and show at least one current exterior view of the drone, a second output means (201, 202, 204, 204), which is equipped to show at least one current display of a ground station of the drone; and a first input means (20, 30), which is equipped to change a parameter of the drone simulation, wherein the training simulation system further comprises a first interface to a simulation means, which is equipped to simulate the physical properties of the drone, and a second interface to a ground control station, which is equipped to control the drone.
