Abstract (en)
[origin: WO2011054506A1] The invention relates to a method, a system, a program and a computer program product for managing a call in a communication network between an addressed party and a calling party, wherein the addressed party provides status data to the network instance, wherein the calling party sends identification data to the network instance, wherein the call is handled by a network instance according to at least a first or a second handling alternative, wherein the choice between the handling alternatives depends on the identification data and the status data.
