Abstract (en)
[origin: EP2497401A2] The cubicle (1) has a door and/or pane (2) provided with a fitting. The door and/or pane is upwardly displaceably fed at an upper guide rail (3) over the fitting. The fitting includes a roller shaft, which runs through the door and/or pane and includes plain rollers. The roller shaft is pivotable around a pivot axis, which runs in a displacement direction (V) and in the door and/or pane. The fitting is completely arranged in the guide rail. A brake device decelerates the door and/or pane and limits the displacement of the door and/or pane in an end position.
