Abstract (en)  
[origin: EP2497537A2] The torso modules (2) have module case (3) and right and left module walls (4,5), and which are arranged along a longitudinal axis of fuselage and connected to one another. Each torso module is transported by road transport vehicle. The torso module is moved from separating position to transport position, so that torso module is arranged transverse to longitudinal axis of fuselage and measured width of torso module is smaller than in separating position. The module case has transverse elements (6,7) which are collapsed in direction transverse to longitudinal axis of fuselage. An independent claim is included for method for dismantling and transporting mobile fire extinguishing practice assembly.
